

Advanced Split Order On Checkout

User Guide

Contents

1. Enabling the extension
2. Providing the condition to split
3. Conditions to split order
 - a) Default Condition
 - b) Split if attribute exists
 - c) Split according to attribute
4. Adding selected attribute

1.Enabling the extension

In admin panel go to Splitorder tab → Configuration → Enable split order → Yes

The screenshot shows the 'General Configurations' section of the Magento admin panel. A yellow bar highlights the top of the page. On the left, a vertical sidebar contains several menu items, with the 'Splitorder' tab selected. The main content area is titled 'General Configurations' and contains two configuration options:

- Enable Split Order** [global]: A dropdown menu set to 'Yes'.
- Splitorder Conditions** [store view]: A dropdown menu set to 'Split If attribute exist'.

2. Providing the condition to split

In admin panel go to Splitorder tab → Configuration → Splitorder Conditions

The screenshot shows the 'General Configurations' section of the Magento Admin Panel. It features a vertical sidebar on the left with several menu items. The main content area is titled 'General Configurations' and contains two configuration options, each with a dropdown menu:

- Enable Split Order** [global]: The dropdown menu is set to 'Yes'.
- Splitorder Conditions** [store view]: The dropdown menu is set to 'Split if attribute exist'.

3.Conditions to split order

a)Default Condition:- In default condition the order will split irrespective of the attribute.It does not matter that attribute is assigned to any of the product or product having assigned attribute is present in order.The order will split depending on the number of products.

General Configurations

Enable Split Order
[global]

Yes

Splitorder Conditions
[store view]

Default

3.Conditions to split order

b)Split if attribute exists:-This is useful when we want to split products based on any particular attribute option.For example we create an attribute,location and create various location option like Location 1 , location2.So order will be split into multiple order based on location values.A different order is created for all products if the order has products having attribute of location1 or location 2.If an attribute is assigned to any of the product and now we choose to place an order by adding the product having assigned attribute and along with that some other products,then our order will be splitted according to the number of products present in the order placed.

Like,if we have 6 products in an order out of which two products have assigned attributes then order will split in 6 different orders having different order ids. If none of the products in an order have the chosen attribute associated with them then the order won't split at all.Like, in our previous example if none of the product out of 6 products has the desired attribute associated with them then there will be a single order having all the 6 products.

The image shows a screenshot of the Magento Admin interface for configuring order splitting. A yellow bar is at the top. On the left is a sidebar with a tree view. The main content area is titled 'General Configurations'. It contains two settings:

- Enable Split Order** [global]: A dropdown menu set to 'Yes'.
- Splitorder Conditions** [store view]: A dropdown menu set to 'Split if attribute exist'.

3.Conditions to split order

c)Split according to attribute:- If attribute is assigned to products in order and also product having chosen value of attribute is present in the order then all the products having the chosen value of attribute will be splitted into different orders.Example:- If any order has 4 products and chosen attribute is “Color” value chosen is “Charcoal” and the products has two charcoal colored products and one Green and one Black product.Then order will be splitted as one order will be created for two Charcoal colored products,one for green and black both.

Likewise,If attribute selected are Charcoal and Green both and the order has 2 Charcoal,2 Green and 2 Black then the number of orders created will be 3 ,one for charcoal,one for Green and one for Black.

General Configurations

Enable Split Order
[global]

Yes

Splitorder Conditions
[store view]

Split according to attribute

4. Adding selected attribute

In admin panel go to Splitorder tab → Splitorder Attribute

- Here add a new attribute or manage old ones.
- Attributes created first needs to be assigned to default attribute set and then later to any required attribute set.
- To split according to any attribute the attribute needs to be enabled.
- If there are multiple attributes, then they will work according to priority.
- If two attributes have same priority then last modified attribute will be applicable.

Select only one value of splitorder attribute

5.How does it work with various Admin Users

- 1.Variou admin users can be created and various Roles need to be assigned to these.
- 2.The selected attribute will be visible in admin user as well and then selected attribute value can be assigned to the user.
- 3.The admin user will then be able to view orders related to the assigned attribute only.

7.Split Order attribute can be seen in Orders Grid

We have added Split Attribute column in Orders Grid.

All the attributes assigned while ordering will be the part of filter for this column and data can be filtered according to it.

8. The user can see only assigned orders and invoices for those orders only.

Orders

User can only see orders of assigned attributes.
